Preface

On behalf of the ClbSE 2023 Organizing Committee, we are proud to present the proceedings of the 26th Iberoamerican Conference on Software Engineering (ClbSE 2023). ClbSE has provided a forum to present recent advances in the practices for the engineering of software-intensive systems since 1998. This year the conference was hosted by the Universidad de la República in Montevideo, Uruguay, which was a perfect scenario to make this high-quality event possible.

In a society increasingly relies on software systems for our daily activity (e.g., in communication, finance, healthcare, and transport), the use of adequate engineering practices in the form of methods, processes, and tools throughout the lifecycle of these systems becomes essential to ensure their suitability. In this context, ClbSE is the leading research forum on Software Engineering (SE) in Ibero-America, which promotes high-quality scientific research and, thus, supports the researchers in this community in publishing and discussing their work. In addition, the conference fosters collaboration and cross-fertilization among academics, students, and practitioners from the industry.

Sixty papers were submitted in this edition of the conference. Each submission was reviewed by at least three members of the Program Committee, formed by leading experts. After a careful peer-review process, 18 papers were finally selected (30% acceptance rate). Five distinguished papers were invited to submit an extended version to the Science of Computer Programming journal, and the best paper received an award certificate. In addition to the 18 original papers, three papers were accepted in the Journal First category, offering an opportunity for the authors to discuss their work with the community as well as to enrich the ClbSE technical program.

ClbSE 2023 hosted the Doctoral Symposium, which aims at bringing together doctoral students working on foundations, techniques, tools, and applications of Software Engineering and giving them the opportunity to present and discuss their research in a constructive and international atmosphere where a board of experts discuss with the students to suggest new perspectives and improvements to the PhD theses. Six ongoing doctorate research projects were presented. Moreover, prof. Guilherme Travassos. (Federal University of Rio de Janeiro, Brazil) presented the keynote “Why, for what, for whom, and how to conduct useful, robust, and reliable Software Engineering research”.

ClbSE 2023 also hosted the 6th edition of the Ibero-American School on Software Engineering (ElbAIS). ElbAIS aims at promoting a forum for discussions regarding Software Engineering, its related technologies and theoretical foundations, allowing the participation of practitioners, undergraduate and graduate students, and researchers.

This year, ElbAIS presented four tutorials, discussing general and specific topics of Software Engineering together with cross-fertilization with other technology disciplines:

Data and Big Data Quality in the context of Software Engineering (Adriana Marotta, Universidad de la República, Uruguay), Quantum Software Engineering (Ignacio García-Rodríguez de Guzmán, Universidad de Castilla-La Mancha, Spain), Software Architecture Challenges of ML-Enabled Systems (Ipek Ozkaya, Carnegie Mellon University Software Engineering Institute (SEI)).

CIBSE 2023 included the Industry Talks, which aims at providing the industry and practitioners means to discuss and work together in exploring how Software Engineer processes, methods, techniques, and tools can provide the industry with better solutions. Seven experts from the industry shared their experience with the CIBSE audience.

The conference had two renowned keynote speakers. Ipek Ozkaya (Carnegie Mellon University Software Engineering Institute (SEI)), discussed the opportunities and implications of AI-Augmented Software Development. Ignacio García-Rodríguez de Guzmán (Universidad de Castilla-La Mancha, Spain), presented an interesting sight about the intersection of software engineering practices in the development of future quantic computing applications.

Finally, we would like to thank all people who contributed to make this event possible. The quality of the technical program is a result of the dedication of the members of the Program Committee and additional reviewers. We would also like to thank all members of the organizing committee, authors, keynotes, panelists, instructors, session chairs and all the participants for their collaboration in making CIBSE 2023 a success. We express our gratitude to the CIBSE Steering Committee for their great support, particularly to Marcela Genero and Renata Guizzardi. Finally, we are thankful for the opportunity of serving as chairs for this conference.
